Claims

[c1]   N

[c2]   That which is claimed is:

1. A system for extracting data from electronically sources comprising:

a processing system using a plurality of component parts working in conjunction producing extraction results.

[c3]   2. A system according to claim 1 in which said source is a website.

[c4]   3. A system according to claim 1 in which said component parts include a plurality of databases.

[c5]   4. A system according to claim 3 in which said databases includes a names database.

[c6]   5. A system according to claim 3 in which said databases includes an additional words database.

[c7]   6. A system according to claim 3 in which said databases includes a titles database.

[c8]   7. A system according to claim 3 in which said databases includes a plurality of small databases.

[c9]   8. A system according to claim 3 in which said databases includes a famous people database.

[c10]   9. A system according to claim 3 in which said databases includes a historic figure database.

[c11]   10. A system according to claim 1 in which said processing system a uses an extraction algorithm.

[c12]   11. A system according to claim 1 in which said processing system a uses a substring scoring algorithm.

[c13]   12. A system according to claim 1 in which said processing system a uses a final name scoring algorithm.

[c14]   13. A system according to claim 1 in which said processing system a uses a plurality of user interface elements.

[c15]   14. A system according to claim 1 in which said processing system a uses a substring score threshold increments user interface element.

[c16]   15. A system according to claim 1 in which said processing system a uses a substring score decrements user interface element.

[c17]   16. A system according to claim 1 in which said processing system a uses a substring score special cases user interface element.

[c18] 17. A system according to claim 7 in which said small databases includes a postal databases.

[c19] 18. A system according to claim 7 in which said small databases includes a direction database.

[c20] 19. A system according to claim 7 in which said small databases includes a time database.

[c21] 20. A system for extracting data from electronically sources comprising:

a processing system using a plurality of component parts working in conjunction producing extraction results, said conjunction parts including a plurality of databases, a plurality of algorithms and a plurality of user interface elements, where said databases includes an additional words database, a titles database. a famous people database, and a historic figure database; said algorithms includes an extraction algorithm, a substring scoring algorithm and a final name scoring algorithm; and said user interface elements include a substring score threshold increments user interface element, a substring score decrements user interface element, and a substring score special cases user interface element.
